**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-7, 17-23, 33-37, drawn to a dock leveler and method utilizing a lip holder to retract a support leg regardless of the speed of descent of the dock leveler, classified in class 14, subclass 69.5.
  - II. Claims 8-16, 24-32, drawn to a dock leveler with speed sensitive support leg retraction apparatus, classified in class 14, subclass 72.5.
  - III. Claims 38, 39, drawn to a method of disengaging a support leg retraction apparatus, classified in class 14, subclass 71.3.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination only relies upon the lip holder structure and its function for patentability. The subcombination has separate utility such as preventing stump-out related damage to the dock leveler; which is overridden by the function of the combination.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the method of Group III cannot be performed by the invention of Group I, since the invention of Group I is not configured to "move a camming surface with a lip portion of the dock leveler" when the lip is not in motion, i.e. in the pendant position.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the method of Group III cannot be performed by the invention of Group II, since the invention of Group II is not configured to "move a camming surface with a lip portion of the dock leveler" when the lip is not in motion, i.e. in the pendant position.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Kenneth Sheehan on 1/26/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
